PROJECTS

3D Human Reconstruction with a Dome System June 2021 - Present

Using more than 80 cameras to construct a dome system for multi-view stereo reconstruction. My work focuses on 3D human modeling.

AIR: AI Reconstruction October 2020 - May 2021

R&D Project. AIR represents reconstruction and rendering with AI, a 3D reconstruction platform based on neural network algorithm. Responsible for implementing open source algorithms - Neural Radiance Field, and developing GPU cluster scheduler. Design the API for interaction between the front end and the scheduler.
